

GERBER SPORTSMEN'S KNIVES

GERBER
Some things you just don't rush.

How do you achieve
the goal of making the
finest knives in the business?
Very slowly.

Whether you are an outdoorsman interested in buying a single Gerber knife, or a retailer interested in selling hundreds of them, we trust you will find this catalog helpful.

Besides explaining the various designs of our knives, and the materials that go into each, we also hope to impress upon you one primary point.

If there is a "secret ingredient" used in the manufacture of Gerber knives, it is the human hand. From first casting through final sharpening, the skilled hands of our knifemiths work patiently, turning out knives virtually one at a time.

"We believe that this, more than any other reason, explains why a Gerber Knife cuts, feels and lasts like no other factory-built blade."

Peter Gerber

THE PAUL KNIFE. Further proof that nothing good ever happens fast. It took us three years of testing, refining and perfecting, before the Paul Knife was finally ready for full-scale production. Perhaps we could have hurried it through faster, but it wouldn't have turned out to be the incredible knife that this one is.

Designed by aerospace engineer Paul Pohlmann, this unique folding knife operates with a patented axial locking mechanism, milled from a solid block of stainless steel to tolerances that are common to camera and watchmaking, but unheard of in knifemaking. Indeed, all components (except handle inlay) are precision-made from aircraft quality high-carbon, hardened stainless steel. Unlike any other knife.

As always, Gerber knifemiths fashion each Paul Knife with painstaking attention to detail. They custom adjust each completed knife for smooth operation, perfect fit and function. (Adjustments, incidentally, which should never be loosened again.)

"Small wonder the Paul Knife has been termed "a turning point in the art of knifemaking."

Deluxe Model 2PM
2 1/2" drop point blade;
white Micarta inlay
are elegant and virtually
indestructible.

Basic Model 2P
2 1/2" drop point blade;
satin finished stainless
handle, sleek and
unadorned.

Deluxe Model 2PW
2 1/2" drop point blade;
exotic inlays of rare
hardwood provide
rich, distinctive look to
each knife.
All Paul Knives Measure
6" open, 3 1/2" closed,
and have a blade thickness of
.117". Leather belt
scabbard is optional.

Opening the Paul Knife is a pressure. Just squeeze bottom and rotate blade outward with same hand, until the unique, lockable click indicates blade is locked open. Fingers need never touch the blade. To close, just reverse procedure.

You resist the overwhelming temptation to release a new knife before it has been thoroughly proven.

SILVER KNIGHT. Here's a family of smaller, lighter folding knives crafted in the same tradition as our bigger folders.

The challenge was to design a knife comfortable enough for pocket use, hardbore enough for executive use, and rugged enough for backwoods use. So successful was the introduction of the first four full size models that we followed with two mini versions.

Silver Knight blades are of a unique stainless steel, heat treated to achieve a hardness of Rockwell C58-60. Their cases are of satin-finished stainless steel that is corrosion and tamish resistant. Two handle inlays are offered, one a rich tropical hardwood, the other of genuine mother-of-pearl from Australia.

256A—Single 2½" drop-point blade with positive lock, tropical hardwood handle inlay. Length open, 5½"; closed, 3¼". Blade thickness, .095".

Same as left knife, but with genuine Australian mother-of-pearl handle inlays.

2500—Two blades, 2½" drop-point and 1½" sheep's foot blades. Tropical hardwood handle inlay. Length open, 5½"; closed, 3¼". Blade thickness, .095" and .060".

Same as left knife but with genuine Australian mother-of-pearl handle inlay.

200A—Single 2" drop-point blade with positive lock, tropical hardwood handle inlay. Length open, 4½"; closed, 2½". Blade thickness, .075".

Same as left knife but with genuine Australian mother-of-pearl handle inlay.

A handsome 7-knife counter display holds three and sells the Silver Knights.

FOLDING SPORTSMAN. The warm glow of solid brass against rich willow gives these knives an almost work-of-art look. But don't be misled. These beauties are beasts of burden.

Blades are of stain-resistant 440-C surgical stainless steel, double-wedge ground by Gerber craftsmen, one at a time. The all-important hinge pin is milled of solid brass, not cut or out from wire. The entire handle frame works as a one piece bobber and liner to offer uncomform strength. The blade locks firmly open and can be released only by pushing the recessed thumb latch. There's even a built-in safety "pause" to prevent snap-shut closing. Another Gerber exclusive, developed by our inventive designers.

Each Folding Sportsman is made with the same attention to detail as every Gerber. Ruthlessly inspected along the way, and rejected at the slightest hint of a flaw.

Of course, words and pictures can only communicate a general impression. The most convincing sales pitch occurs when you pick up a Folding Sportsman. Regardless which size, at once you will sense the care with which the knife was built. You'll feel the precise balance, the natural way it fits your hand. You'll see how all components and surfaces align, flawlessly.

Then you'll begin to understand, and we hope, appreciate our penchant for building knives the right way.

Folding Sportsman I
Single, 2 1/2" drop point stainless steel blade. Inlays of tropical hardwood. Length open, 6 1/2"; closed, 3 1/2"; blade thickness, .100".

Folding Sportsman Ed
Same as Folding Sportsman II but with a drop point blade.

Folding Sportsman II
Single, 3 1/2" stainless steel trailing point blade. All-brass frame construction with inlays of tropical hardwood. Length open, 8"; closed, 4 1/2"; blade thickness, .100".

Folding Sportsman III
Single, 4" stainless steel trailing point blade. All-brass frame construction with inlays of tropical hardwood. Length open, 9 1/2"; closed, 5"; blade thickness, .125". Includes a leather belt scabbard.

Genuine top grain leather belt scabbards are crafted in Gerber's own leather shop.

Each Gerber Folder is a labor of time and skill. Hinge pins are machined of solid steel or brass to microscopic tolerances. Blades are of super edge-holding 440C surgical stainless steel. Frame and blades are individually machined for years of flawless function.

MAGNUM FOLDING HUNTER. Here's the epitome of a true hunting knife.

This brute is crafted with serious dressing and skinning chores in mind. The 3 1/2" blade is of 440-C surgical stainless steel, double wedge ground to extraordinary sharpness and tempered to a hardness of Rockwell C57-58. When opened, the blade locks solidly in place and a recessed thumb latch must be depressed to close. Blade spine is ribbed at base to provide a positive grip.

The solid brass frame, with its tropical hardwood inlays, features contoured finger grips for a comfortable, firm grasp even when wet.

The heft and balance of this rugged, hand-some knife must be felt to be appreciated.

Magnum Folding Hunter—Single 3 1/2" drop point stainless blade. Length open, 7 1/2"; closed, 4 1/2"; blade thickness, .125". Leather scabbard included.

CASSIC. As the name implies, this handsome folder has clean, traditional lines. Its comfortable deninger style frame is cast of solid brass and features Gerber's renowned tropical hardwood inlays.

Like the folding Sportsman models, the pivotal hinge pin in this knife is machined from solid brass, not merely cut from wire stock. And each Classic is carefully hand-assembled, hand-finished, hand-sharpened.

Classic—Single, 2½" stainless steel drop point blade. Length open, 6½"; closed 3½". Blade thickness, .100".

PK SERIES. Four versatile knives in one basic size.

The most noticeable feature of these folders is their brushed stainless steel frame. Very handsome, but also very practical and very rugged.

The blades are of 440-C surgical stainless steel, tempered to a Rockwell hardness of C57-59. The inlays are of a handsome tough tropical hardwood.

Like all Gerber Folders, each PK blade is custom-matched and fitted to a specific frame. Each is skillfully hand-honed and hand-inspected. Not a random sample mind you, but every single knife.

PK-1—Two stainless steel blades: 3" trailing point blade for general cutting (.100" thick), and 1½" drop point auxiliary blade, extra thin (.055") for razor fine shaves. Length open, 7"; closed, 4". Leather scabbard optional.

PK-2—Single 3" stainless steel trailing point blade that locks open. Length open, 7"; closed, 4". Blade thickness, .100". Leather scabbard optional.

PK-3d—Same as PK-2 but with drop point blade.

PK-3—Two stainless steel blades: 3" trailing point for general cutting and a really tough 2½" screwdriver/wire stripper blade which locks open. Length open 7"; closed 4". Cutting blade thickness, .100". Leather scabbard optional.

Handsome display case comes with all ten folders shown on these two pages. The unit measures 14½" wide, 2" deep, 25" high. Available in glass-covered, above-counter model or open, under-counter model.

You put the finest materials you can buy into the hands of the most skilled craftsmen you can find.

PRESENTATION SERIES. You see here what are considered the finest fixed blade hunting knives produced in any factory of the world, for, although they are built within our Portland, Oregon plant, they are, for all intents and purposes, custom made knives. Here's why: Only a few master Gerber craftsmen have earned the right to create these knives. They work separately in a special section of the plant, each knifemaker taking a knife through the production steps.

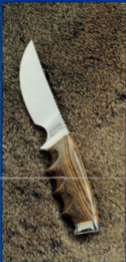

They begin with a blade of 440-C surgical stainless steel, unequalled in edge-holding capability. Each blade is hardened to a Rockwell rating of C58-60, and the tested hardness is etched into the blade base.

Handles are carved to a comfortable grip out of a solid hardwood from South America, known for its extremely dense wood fibers and durability. The deep finger grooves, besides looking nice, provide a sure, solid grip under any conditions. In either hand. A finger notch in the blade ribell, along with a ribbed spine on top of the blade, allow the hand to be moved forward for more controlled cuts.

The handle is bonded permanently to the blade. The buttong and guard are solid stainless steel investment castings accented by solid brass inserts which contrast richly with the wood handle. All resulting in a knife that is as impressive to look at as it is to use.

4095—4" skinning blade. Overall length, 9". Blade thickness, .156".

4255—4 1/2" hunting/campaign blade. Overall length, 9 1/2". Blade thickness, .156".

4565—4 1/2" fish and game blade. Overall length, 9 1/2". Blade thickness, .156".

4735—4 1/2" big game blade. Overall length, 9 1/2". Blade thickness, .187".

5255—5 1/2" heavy duty hunting blade. Overall length, 10 1/2". Blade thickness, .187".

Each Presentation Series knife comes in its own, top grain leather belt sheath, custom-fitted by Genber leather craftsmen.

Attractive display unit measures 19 1/2" wide, 2 1/2" deep, 20" high. (Also available in under-counter version.)

You don't stop when you reach the point of producing "good" knives, you continue striving towards excellence.

MARK I & MARK II. These knives have been designed with a single goal in mind: Survival. Under the most extremely adverse conditions.

The extra thick blade steel is different than any of our other knives. It's a special alloy tool steel, selected for its combination of toughness and shock resistance. Gerber craftsmen carefully hone this steel into a keen, double-edged instrument with a strong aluminum alloy handle. An Armor-Hide coating is then fused to the handle to create a virtually slip-proof surface.

Mark I Survival Knife. 4 1/2" blade, overall length, 9". Blade thickness, .250". Comes with leather belt/boot scabbard featuring thumb-release straps and metal clip for boot or belt.

Mark II Survival Knife 6 1/2" blade with serrated edge near tip for heavy cutting. Overall length, 12". Blade thickness, .250". Comes with leather scabbard featuring leg tie thong. Available with 5" Spornomah's Steel or without as shown.

ARMORHIDE™ HUNTING KNIVES. Here's a line of no-compromise working knives that combine super-hard high-speed tool steel blades with non-slip Armorhide™ handles. Very effectively.

Gerber craftsmen begin with a blank of high-speed tool steel, so hard it is actually capable of cutting other steel. On the Rockwell scale it measures in at a hardness of C60-62. Each blade is double wedge ground by hand to form an extremely sharp, yet strong edge. Gerber's special hard chrome plating keeps steel blades bright and impervious to stains. (Note: Fish-a-holic has stainless steel blades.)

Notice there are no rivets or screws in the handle. Instead, the aluminum alloy is cast directly onto the notched tang of the blade, creating a permanent bond. Then Armorhide™, a ground thermo-setting vinyl, is fused to the handle resulting in the unique, non-slip surface these knives have become so famous for.

Armorhide™ knives are available in six sizes to handle anything from small fish to big game. Without a slip-up. Each comes complete in its own custom-fitted, leather belt scabbard.

A-400—4" drop point blade, for all purpose hunting, fishing. Overall length, 8 1/2". Blade thickness, .065".

A-475—4 1/2" drop point blade, designed for large game. Overall length, 9 1/2". Blade thickness, .100".

A-425—4 1/2" utility skinning blade, perfect for camping and field dressing chores. Overall length, 8 1/2". Blade thickness, .100".

A-325—3 1/2" game and fish blade, ideal for cleaning smaller fish. Overall length, 7 1/2". Blade thickness, .062".

A-450—4 1/2" general utility blade. Overall length, 9". Blade thickness, .060".

Pike—3" straight back blade of stainless steel for cleaning small game and fish. Overall length, 7". Blade thickness, .060".

Each Armorhide™ knife comes in its own hand-fitted leather belt scabbard, crafted in Gerber's own leather shop.

Armorhide™ knife display case includes the five hunting knives shown on this page plus the Mark Land® Survival (paracord rope) and the Cobra, Fish-a-holic, and Trout® 8 1/2" and 9" knives, described on page 18. Also a leather scabbard and Gerber's unique (patented) vinyl (covering the display blades only) 11 1/2" wide, 2 1/2" deep, 20" long. Available in your favorite outdoor store or direct from Gerber's own leather shop.

You refuse to be sidetracked by time-saving short cuts that inevitably short-change quality.

FISHING KNIVES. While these knives may appear more utilitarian than our others, they are still produced with an uncompromising attitude towards quality. For maximum resistance to moisture and salt water, the blades are fashioned from the toughest stainless steel available: 440-C surgical stainless. This incredible steel resists pitting and staining yet also holds its razor sharp edge unusually well, requiring only occasional touch-up sharpening.

The all-aluminum handles are cast directly to the blade tang to become as one. They then get an Armamide® skin for non-slip cutting control even with wet hands. The Fisher 5 and 8 have a virtually indestructible ABS handle that's also molded directly onto the blade tang. The textured surface and built-in stripping spools help make the work go fast and smooth.

Great Bird—7½" blade with stripping spoon handle. Overall length, 8". Blade thickness, .050". Scabbard included.

Muskie—5" blade ideal for boning and filleting all size fish. Overall length, 11¼". Blade thickness, .062". Scabbard included.

Coho—6" blade with stripping spoon handle. Overall length, 11¼". Blade thickness, .062". Scabbard included.

Fisher 5—5" drop point blade, perfect for bait and smaller fish. Overall length, 11". Blade thickness, .072". Scabbard optional.

Fisher 8—8" drop point blade. New control tailored to filleting large fish. Overall length 14". Blade thickness, .072". Scabbard optional.

SHARPENING TOOLS. We offer some exceptional ways to keep your Gerber blade factory sharp.

Most notably, The Gerber Sportsman's Steel. It's built from a block of incredibly hard steel, then chromium carbide is diffused directly into the surface. The resulting tool is so hard it can be used to dress the edge of any cutting instrument, including Gerber high speed tool steel blades. It leaves a clean, razor edge, free of burrs or feathering.

The tempered chisel point, another Gerber exclusive, comes in handy for hacking, prying, and splitting, jobs that you wouldn't use a knife for.

If a blade needs extensive sharpening, we offer our oil-impregnated sharpening stone that is double edged. One side coarse, the other hand for final honing.

Finally, there is our popular Field Sharpening Kit. This includes the oil-impregnated double edged tool, 5" Sportsman's Steel, in a leather scabbard.

5" Sportsman's Steel
Available in folding version with leather handle and tie thong, or conventional leather belt scabbard.

5" Sportsman's Steel
Available in folding version with leather handle and tie thong, or conventional leather belt scabbard.

Field Sharpening Kit
A complete sharpening outfit in one handy package: leather scabbard, 5" sharpening steel with leather thong, and double-edged (coarse-grit/medium-grit) oil-impregnated whetstone.
